ASHER OSTROWSKI

(704) 223-6387 | asherdostrowski@gmail.com | linkedin.com/in/asher-ostrowski | asherostrowski.com

Mechanical Engineering graduate with extensive hands-on experience in mechanical design, product development, prototyping, and fabrication. Especially interested in Robotics and EV systems.

EDUCATION

North Carolina State University | Raleigh, NC

B.S. Mechanical Engineering, May 2026 | Minor: Forest Management

ENGINEERING EXPERIENCE

NC State Pack Motorsports – Formula SAE | Raleigh, NC | Oct 2022–Jul 2026

Chassis Engineering Lead | 2025–2026

- Led a seven-member chassis engineering team. Directed design, fabrication, integration, and testing.
- Directed both electric and internal-combustion competition chassis development in a single season, supporting the team's transition to EVs.
- Dedicated 40+ hours per week to leading the team while a full-time student.
- Managed chassis requirements, structural analysis, and design reviews while coordinating interfaces across suspension, drivetrain, electrical, and high-voltage systems.
- Optimized our team's processes, resource allocation, manufacturing procedures, and technical documentation to meet development deadlines and support future builds.
- Designed and manufactured chassis components across five vehicle builds over three years, including CAD, machining, assembly, and TIG welding, before being promoted to team lead.

Engineering Intern, Ricoh Center for Additive Manufacturing | Raleigh, NC | Jul 2024–Aug 2025

- As one of the first interns hired at Ricoh's new Additive Manufacturing Center of Excellence at NC State, helped establish day-to-day engineering and production operations, coordinating equipment, materials, and manufacturing processes to take advanced 3D printing projects from design through production.
- Advanced hardware projects through design, prototyping, testing, & production, working across engineering teams to turn concepts into manufacturable solutions.
- Refined manufacturing processes, established and wrote documentation for safety procedures, and researched new additive manufacturing applications, including metal additive manufacturing.

RESEARCH & DESIGN PROJECTS

FEA Validation Using Strain-Gauge Data | NC State University / Formula SAE

- Designed and fabricated a custom chassis test rig to compare finite element analysis (FEA) predictions with physical strain-gauge measurements. Oversaw development of a PCB- amplifier system to collect and log strain gauge data from the vehicle chassis during on-track testing.
- Analyzed simulation and test results to evaluate model accuracy; earned second place in the Cummins Innovation Award competition at Formula SAE Electric.

Composite EV Battery Enclosure – Senior Design | NC State University

- Developed an original design for a lightweight composite EV battery enclosure, including material selection, engineering design, and fabrication.
- Optimized the enclosure design to reduce weight while meeting structural strength, fire resistance, and battery safety requirements.

TECHNICAL SKILLS

Design & Engineering: CAD(Solidworks, Fusion, AutoCAD), MATLAB, mechanical design, FEA(Ansys), structural analysis, vehicle systems

Manufacturing & Fabrication: TIG welding, machining, prototyping, tooling, assembly

Additive Manufacturing: FDM, SLA, SLS, production workflows, process development

EV & Robotics: EV systems, robotics, hardware development, subsystem integration, testing

ADDITIONAL EXPERIENCE

AmeriCorps Conservation Corps Member, Rocky Mountain Conservancy | Boulder, CO | May–Aug 2023

- Selected through a national application process to work with the National Park Service and U.S. Forest Service professionals on construction, conservation, and land-management.
- Worked on field planning, construction methods, field mapping using Avenza Maps and ArcGIS, drainage, rock work, and trail restoration.
- Completed multi-week backcountry projects using specialized equipment; trained newer crew members in equipment operation, maintenance, and safety.

LEADERSHIP & ACTIVITIES

Formula SAE Structural Design Reviewer — Invited to be an alumni reviewer evaluating competing Formula SAE teams' structural designs, engineering analyses, and compliance with competition safety and design requirements.

FIRST Robotics Team SPORK #3196 — Active all four years of high school, serving as Mechanical Lead, Project Management Lead, and Lead Robot Driver. Competed twice at the FIRST Championship against teams from around the world.

Albright Entrepreneurs Village, NC State University — Accepted into the university's Entrepreneurship Village, a community focused on innovation, entrepreneurship, and product development, with an emphasis on bringing ideas from concept to market.
